

Digital Image Processing and Colour Management

Imaging Associates offers this comprehensive colour management program. If any of the situations describe you - Imaging Associates can help.

- Are you moving from film to digital photography and needing help to set-up a reliable "workflow" based on sound Colour Management principles?
- Are you a professional photographer who needs to satisfy the demands of a publisher or agency for a consistent reproducible product?
- Are you an artist frustrated that Colour Management complexities are getting in the way of your creativity?
- Do you need a firm grasp of Colour Management theory to give you the foundation to solve your own Colour Management problems as they arise?
- Do you use Apple Mac hardware running Mac OS X as your Digital Image Processing platform?
- Have you attended other Colour Management training that was run as a "Seminar" and found you were one of a sea of anonymous students unable to interact with the presenter and ultimately not enriched by the experience?

Contact us to find out more about our hands-on full-day Introduction to Digital Colour Management Course.
